

Filter for industrial air

Ventilation For the purification of industrial air from the dry particles Filterman have developed cartridge filter systems, Mobile, AB, AC and PL. Appropriate applications include purification of air from blasting, grinding, welding, laser and plasma cutting.

Flow range is 1000-28000 m³ air/h and the efficiency is 99.9% for particle sizes from 0.2 to 2.0µm, according to Filterman. Filter class is M according to DIN EN 60335t.

The four series include a total of 45 sizes. All have an integrated fan in sound insulated enclosure and pre-wired electrical and automation, making it installation and user friendly.
